Bio-Wash 1227 is quickly becoming a **GLOBAL LEADER** in new, astonishingly effective, cleaning and agricultural advancements.

This **100% botanical, biodegradable, non-toxic, certified Carcinogen-Free** soap is creating international excitement. It is the result of many years of testing and research. Simply put, it **provides protection and nourishment to living organisms** with absolutely **no detrimental side effects to the organism or the environment.**

Fundamentally it is a soap... a nutritional soap for living organisms. A soap is a combination of ingredients, that when combined with a surfactant, act to break down residues and allow them to be washed away.

Plants, like humans, need relief from environmental residues. They are exposed to an ever increasing toxic load... the only difference is that they cannot wash themselves, and their natural bathing and nourishment method – rain – has lost much of it's cleaning and nourishment abilities due to the residues it now carries and is also exacerbated by drought conditions.

This proprietary formulation and blending creates not only cleaning, but also **facilitates nourishment.** This blend assists plants by removing the build-up of potentially toxic grime that accumulates, and **stimulates nutrient absorption.**

Governments and environmentally aware groups are hailing it as the **ULTIMATE SOLUTION** to toxic, illness-causing chemicals that are so debilitating to their citizens and farmlands.

In Mexico, they call it "**Jabon Majico,**" ("Magic Soap"). Some are even calling it "**Holy Water.**"

Roger Pope, U.N. Agriculture Specialist says, "I have spent 40 years studying agriculture. If there was another product in the world like BioWash, I would know it."

PLEASE NOTE: BioWash is currently in the registration process with the U.S EPA as a "**low risk bio-pesticide**" but until EPA registration is complete, it cannot be sold to U.S. citizens as a pesticide. U.S. growers willing to test and record their results per EPA test standards can purchase at a special "tester's discount."

Mexican and other foreign farmers and officials are excited about finding a new **non-toxic, carcinogen-free and 100% biodegradable** solution to so many of their toxic chemical problems. They are delighted to find a single **Carcinogen-Free** solution that stimulates such **spectacular increases in farm income**.

Mexican officials are currently testing it on numerous crops and remediation projects. To date, **all their tests have been positive**. They wish to replace all the toxic chemicals that are destroying their farmlands and citizen health with non-toxic, Carcinogen-Free BioWash.

RESULTS:

ASTOUNDING CORN PRODUCTION = HUGE PROFITS!

- Dr. Enrico Rico, Professor, **Poly Technical Institute**, Mexico **increased corn yield income from the average \$100 per acre to \$400 per acre**. His corn reached 8' high and produced much larger and sweeter ears that **sold at premium prices**.
- **In Guanajuato, Mexico**, Dr. Rico, tested BioWash in colder, higher elevations. He reported **producing noticeably sweeter pomegranates, papayas and oranges**. (Guanajuato is a higher elevation, colder climate, not normally suitable for tropical fruits.)

EXTENDED GROWING SEASON = GREATLY INCREASED PROFITS

- Dr. Enrico Rico's brother's tomato plants **produced tomatoes for over twelve weeks rather than the normal six weeks of production** in his area.

SPECTACULAR FINANCIAL BENEFITS

- Antonio Gutierrez grows limes near LaRuana, Mexico. In 2007, his sales income was +/- \$18,000.00. In 2008, Antonio BioWashed his trees. **His yield and quality improvement was so dramatic that his income soared to over \$100,000.00!**

- Before BioWashing, his trees produced two or three limes per cluster. After BioWashing, he enjoyed a **dramatic increase**. This photo shows Antonio holding **eleven (11) healthy limes in one cluster!**

(1) Left -Pedro LaCosta, shown enjoying one of Antonio's high quality limes.

- The quality of Antonio's insect-free limes was so improved that the local packinghouse gave him six (6) pesos per liter rather than the normal four (4) pesos.
- Antonio was so impressed with his BioWash successes; he tested it on 25 acres of papayas. The Governor, Secretary of Agriculture and other farmers' traveled from miles away to see his spectacular results. His engineer predicts over \$600,000.00 in papaya sales.

(1) An overview of Antonio's 25 acre experimental BioWashed papaya grove, (2) a single tree with 61 huge papayas (other trees had 100+) and (3) Remarkably strong and healthy trees.

- Roberto Garcia, Nuevo Italia, Mexico, BioWashed 1,000 mango trees and **reported increases averaging 300 mangos per tree; producing an extra \$60,000.00 income.**
- In Colima, Mexico, Juan Avila Bio-Washes his coffee trees and markets **"Pesticide-Free"** coffee beans.
- In Michoacan, Mexico, BioWashed blackberry vines produced many, many more, enormous, sweeter blackberries than in the owner's history, bringing unprecedented profits to the farmers.

EARLIER CROPS = BEATING COMPETITORS TO MARKET =HIGHER PROFITS!

- In Colima, Mexico, Juan Garcia induced his peach trees to **bloom six weeks earlier**, thus enjoying an **early market advantage and increased income** with his peaches.

BIGGEST, SWEETEST WATER MELONS, CANTALOUPE & BLACKBERRIES

- Pedro LaCosta reported that BioWashing watermelon and cantaloupe vines produced the most bountiful harvest of the largest, sweetest melons ever reported in Mexico! He also reported that blackberries washed with BioWash grew larger, sweeter, and remained firm longer; thus increasing the economic value of this crop.

In the United States, farmers are also reporting remarkable results with the BioWash 1227. The BioWash 1227 easily qualified for the USDA's "BioPreferred" designation.

Growers report with excitement about vastly increased yields of easily marketable fruits and vegetables.

Some reasons for their excitement include:

PLANT HEALTH= LESS TOXICITY=IMPROVED CONSUMER HEALTH

- Bob and Vivian Murray, Owners, TreeHouse Nursery, Bokeelia, Florida, credit BioWash 1227 with saving their mango nursery and **making their nursery one of the most prosperous in Florida**. Before discovering
- BioWash, they had been discouraged and were considering closing their family business. Using BioWash, **their plants were transformed from sickly, unattractive and unmarketable plants to some of the healthiest, most lustrous and sought-after plants in Florida**. Treehouse is now a major supplier of lush, disease-free tropical fruit plants.

BETTER GERMINATION= LESS SEED COSTS=HIGHER PROFITS

- When seeds are washed with BioWash, **germination approaches 90-100% instead of the normal 40-60%**. (Tree House Nursery, Bokeelia, Florida)

EASIER GRAFTING= INCREASED SUCCESS

- New grafts washed with BioWash survive better, are healthier and grow faster.
- Vivian Murray washes every graft with BioWash and **reports nearly 100% successful, healthier grafts**. (Tree House Nursery, Bokeelia, Florida)

FASTER SPROUTING =EARLIER TO MARKET= HIGHER PROFITS

- Charles Olsen, cherry grower, Sunnyvale, California stated that **the ability to market cherries as little as three weeks early will produce enormously improved profits!**
- Steve DeLorme, Washington, tested the effects of BioWashing Irish potato eyes. The BioWashed eyes **sprouted and grew out of the ground a week sooner than unwashed eyes**. They grew noticeably larger and healthier than the unwashed control potatoes.
- The following photos show (1) BioWashed potatoes growing out of the ground while the un-BioWashed eyes are not yet visible. (2) BioWashed potato plants are obviously much bigger and healthier. The **BioWashed roots are visibly larger and better developed, allowing greater absorption of nutrients**.

MORE NUTRIENTS=BETTER HEALTH FOR CONSUMERS

- BioWashed potatoes sprouted sooner and grew significantly stronger roots, permitting the **absorption of more nutrients from the soil.** (Steve DeLorme, Washington)

FREEZE RESISTANCE = REDUCED RISK= EXTENDED SEASONS.

- Steve DeLorme tested BioWashing some potato eyes before planting and planting some without BioWashing. (See above) The BioWashed potatoes sprouted quickly and grew fast, strong and healthy. **The non-BioWashed eyes sprouted late, grew slow and weak and were killed by a freeze. The BioWashed plants survived.** Note the difference in root structure.

- Jim Little, Lemon Cove, CA reported that in January 2007, a surprise California freeze (27f.) destroyed 70% of the California citrus harvest. **All oranges on 4,400 trees that Jim BioWashed survived with no damage.**

- Across the highway, Jim's neighbor had not BioWashed his trees and lost all oranges.

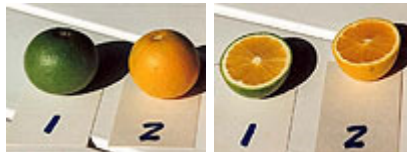

- Joseph Powell, Owner of Powell's Nursery, Punta Gorda, Florida **drenches all of his ornamentals before each predicted freeze. He reports no freeze damage.**

- Before a 27-degree freeze, Madeline Bohannon, President, Rare Fruit Council, Ft Myers, Florida, **BioWashed all but one tree. She lost the tree she missed, but saved all the rest from freezing.**

INCREASED SUGAR = IMPROVED MARKETABILITY=MORE PROFITS

- BioWashed oranges **tested at 20% more sugar (BRIX Test)** than oranges produced by un-BioWashed trees, improving market desirability and profits. (Little Ranch, Lemon Cove, California.)
- Benefit: Sweeter tasting fruits are easier to market and bring repeat sales

REDUCED FERTILIZER COSTS= HIGHER PROFITS

- Bonny Lewis, Botanist, Burgess Island, Florida is creating a "Botanical Gardens" atmosphere in preparation for marketing an upscale home development. She recently discovered BioWash 1227 and wishes she had found it sooner. She discovered that she could **reduce fertilizer costs by adding BioWash to her water when applying fertilizer.** She believes that the quantum sized BioWash particles help her plants absorb nutrients and improves plant health and growth rates.

MORE SUCCESSFUL TRANSPLANTING= HIGHER PROFITS

- Bonny reports that **washing the entire plant, including roots, limbs and leaves while transplanting helps the plant to stay strong and keep growing without shock or trauma.** The following photo shows Bonny standing with a newly transplanted bush that suffered no trauma.

FASTER PRUNING RECOVERY= IMPROVED APPEARANCE=EARLIER TO MARKET

- Bonny does extensive pruning and is delighted with **remarkably rapid recovery of pruned plants.** The following photos show typically newly pruned and fully recovered bougainvilleas after ONLY two weeks of drenching with BioWash.

DRASTICALLY INCREASED YIELDS = HIGHER PROFITS

- It is not a fertilizer, but James Little, Owner, Little Ranch, California, credits Bio-Wash with a **20% increased in orange production.**
- A Campbell Soup supplier, Montrose International, reported **extra full bearing pepper harvests.**
- Phil Morris, Florida, enthusiastically advised that his **gardenias nearly doubled in diameter from two to nearly four inches.**
- Mike V., Miami tested BioWash against a black substance on his mangos. A surprising benefit was a “miraculous” increase in yield. During the previous season, Mike estimated a yield of 40 to 50 mangos. After BioWashing his tree in the next season, his **yield soared to 800+delicious mangos!**

(1) Photo of neighboring trees that had the same soil, sun, rain, temperature, etc. They each bore less than

20 mangos. (2) Mike's tree in bloom in February. The blooms were so spectacular; curiosity seekers created traffic jams on his street. (3) Mike's tree in May, loaded down with mangos. (4) Mike's tree limbs loaded with mangos. (5) Mike's beautiful, healthy, delicious mangos.

- A five-year-old "back yard" mango tree in Matlacha, Florida had **never produced more than four mangos in a season**. It was BioWashed twice monthly during the 2007 season. Astoundingly, **yield leaped to 62 delicious mangos**.

TOXIC INSECTICIDE & PESTICIDE REMOVAL= IMPROVED HEALTH

- 1ST EnviroSafety's cleaner is the only known cleaner proven by Better Housekeeping to remove toxic pesticidal chemicals from fruits and vegetables.

EXTENDED FRUIT & VEGETABLE FRESHNESS (FDA Test) = COST SAVINGS + MANY GROWER, RETAILER & CONSUMER BENEFITS

- Our Botanical Dish Liquid extends freshness. The following photos of washed and unwashed produce were taken 14 days after washing.

- 1st EnviroSafety tested the benefits of washing tomatoes with our Dish Liquid. **After 14 days, the unwashed tomato had to be discarded. The washed tomato was still good after 46 days at room temperature and was eaten by Dr. Tidwell.** 1st EnviroSafety is pursuing FDA approval to label its Dish Liquid as a Fruit & Vegetable Wash.

WINTER GRASS = IMPROVED BEAUTY & PROFITS

- Within a few weeks after Bio-Washing the Arteman lawn, Matlacha, Florida the grass **recovered from winter dormancy to green, lush and beautiful.**

- Equine and livestock owners are thrilled to learn that they can **provide fresh pasture grass for their animals throughout the winter months.**
- **Hay and alfalfa growers can greatly increase production and profits during the dormancy season.**

Additional Benefits

Bio-Wash removes dust, dirt, oil, grease, mold, insect stains, and toxic insecticides from fruit trees and vegetables. It cleans farm tools and sprayers while in use.

More Benefits Coming

Upon completion of the EPA registration as an “insecticidal soap,” additional exciting benefits can be published for U.S. markets.

More Accolades

An environmental engineer described it as ***“planet changing.”***

A Future Studies professor described it as ***“The most important environmental advance of the 21st century.”***
